11-25-00

Dear Sirs:

9609 '00 DEC -6 A11:11

Please grant a petition to stop the slaughter of downed (sick, contaminated) animals docket # 98P-0151/CP1.

animals who are too sick to stand (CATTLE) are being killed with the healthy ones for human meat consumption. Their bacteria is in the meat we eat. Would you feed this to your children? I don't want to, but have no choice when I buy meat - it is all mixed and consumers don't know. These sick animals could have "Bovine Spongiform Encephalopathy" BSE, or "Mad cow disease," the same bacteria as "Creutzfeldt-Jacob disease - a fatal human disease.

C 3159

The cows are also dragged or pushed with tractors - too sick to stand + walk - to slaughter.

98P-0151

If you'd seen graphic pictures like I have of this, you may think twice. Weeding out the sick will not cause economic problems. They equal SMALL %.

Please help. -Jane Sevrens concerned Mother.
